

Good afternoon judges.

Imagine a father who is 45 years old. He works every day, pays his bills, saves what he can, and believes he is doing everything right. One morning, he feels a little tired. Nothing serious, or so he thinks. A few months later, he is diagnosed with diabetes. The treatment is expensive, his insurance does not cover enough, and his savings begin to disappear. Loan payments are missed, his credit score drops, and his family starts cutting essentials just to stay afloat.

What started as a health issue quickly became a financial crisis. And the heartbreaking part is that every warning sign was there months earlier, but no one connected the dots.

Today, our systems are fragmented. Banks understand money, hospitals understand health, and insurance companies understand policies. But nobody understands the human being caught in the middle.

That is why we built PLUTUS.

PLUTUS is an AI-powered crisis prevention platform that predicts financial and healthcare risks before they become disasters. Using a network of autonomous AI agents, PLUTUS analyzes medical reports, spending behavior, insurance coverage, and fraud patterns to identify hidden risks and generate personalized prevention plans not after the crisis, but before it happens.

Imagine receiving a notification that says: "Your health indicators suggest a rising risk of diabetes. Based on your current insurance and savings, this could create a financial burden within the next 18 months. Here are three actions you can take today to avoid it."

That is not a chatbot. That is a guardian. That is PLUTUS.

In a single platform, we combine healthcare intelligence, financial analytics, fraud detection, and insurance optimization to create a unified risk engine focused on one mission: protecting people before life goes wrong.

Our vision is simple a future where no family loses financial stability because a preventable health risk went unnoticed. A future where AI does not just answer questions; it protects lives.

We are PLUTUS.

Predict. Protect. Prosper.

Thank you.
